ASSISTANT GUNNER'S PACK (400RND OPTION) TEST

Tested Item Description:

BULLDOG ASSISTANT GUNNER'S PACK - 400 RD OPTION (SKU: BAG-4)

KIT INCLUDES:

- SPARE BARREL BAG
- RAIL PACK FRAME
- HEAT MITT (USED TO FACILITATE HOT BARREL CHANGING OPERATIONS)
- WAIST BELT
- WEAPON SLING ASSEMBLY
- BARREL MAT
- SHOULDER STRAPS (HEAVILY PADDED WITH METAL QUICK RELEASE BUCKLES)
- 400RND OPTION TESTED INCLUDED 2X 200RND MODULAR AMMO FEED BAGS

Testing:

An MG Team per platoon was selected to test the AG pack. Each team received 400rnds of 7.62 4:1 link ammunition and were tasked to rapidly move from a given position to the firing line, place the MG into action, and engage a series of transition paster targets on both bipod and tripod, simultaneously conducting both rapid ammo and barrel changes.

Feedback:

The AGs loved the pack. It was comfortable, durable, functional, and significantly increased their ability to rapidly conduct crew drills, change barrels, and load/re-load ammunition w/o a lull in fire or rate of suppression.

Built around the MOLLE rucksack frame, it is low-profile, ergonomic, and completely modular and customizable to fit the user and mission. Pouches and accessories can be adjusted and reconfigured based off mission requirements, AG preference, and weight distribution.

PFC Leonardi and PV2 Bronson of WPNs SQD, 1/C/1-27, demonstrate the capability, efficiency, and suppressive sustainability of the 400rnd option while executing machinegun firing table one transition fire.

ASSISTANT GUNNER'S PACK (400RND OPTION) TEST

Recommendation:

The 400 RND optional allows for greater flexibility in the customization of the pack configuration, as well as, the amount of ammo to carry based of mission requirement. RECOMMEND one per gun team. Total of 18 packs per company.

Other AG Pack Options:

For questions or request to use kit, call or email: [CPT BUCCI, CDR, C/1-27IN](#) / 655-4196
