

Bulldog Carl Gustav 84mm Kit

This is the Current Method of Deployment.
Deploying through any type of Jungle, Woods, or
Mountain Terrain is virtually Impossible with
Today's Methods.

With the Bulldog Frame we can Mount Brackets
that will Securely hold the Carl Gustav to our
Frame. The Vertical, Horizontal, or at an angle is
possible. This is up to the soldier,

All Items are Welded and Secured with Stainless
Steel Locking Hardware.

With the Bulldog Carl Gustav Kit, a Two Soldier Weapon Team can easily Transition from their Machine Gun to their Gustav.

Due to the ability to place the Gustav at an angle this prevents the Weapon System from hitting their heads while in the Prone Position.

Deployment Method

- The Gunner will deploy the Carl Gustav Tube
- The Ammo Bearer will carry 2-6 Rounds in either our Large / or Medium Ruck. Padded removable Dividers are placed inside allowing the soldier to carry between 2-6 Rounds depending on the mission
- (6) Padded Single Round Pouches should be added to distribute ammo amongst the Squad

Single Round Pouches are Available. This way extra Ammo can be divided up amongst the Squad.

They are 360 Degree Padded to prevent damage to the Round or the Primer.

-
- General Recommendations is for the Ammo Bearer to Carry no more than 3 Rounds.

Custom 2 Day Ruck

- **2500 Cubic Inches: 1.5 Lb**
- **Mounts over the Mortar Tube**

The 2 Day Assault Ruck mounts over the Gustav in the exact manner as the Mortar Tube, Javelin or 240 Ag Ammo Pouches
